Search Notes

Please contact me if you need to search the pending files.

Please contact me if you encounter any problems with the file or the disk.

Please feel free to contact me if you have any questions or would like to amend the search.

Thank you for using STIC services.

Regards, Deirdre Arnold

Subject:

SEQUENCE SEARCH: U.S. Serial No. 09/319,156

Please search **SEQ ID NOS.:** 6, 9, 10, and 12 from the aforementioned application (U.S. Serial No. 09/319,156) v. all relevant databases.

Please provide the first 30 SUMMARIES.

Place results on both paper and disk.

Thanks!

A STATE OF THE STA

99 bhtg: *
99 bov: * GenEmbl: * 10: 11: 12: 13: Database

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       NOTE: This is a 'working draft' sequence. It currently consists of 8 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Insert size: 182000; agarose-fp

Lumming sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations

together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission

corresponding to the overlapping clone, as we submit sequences with

only a small overlap as described above.

The following abbreviations are used to associate primary accession

numbers given in the feature table with their source databases:

Em; EMBL; Swi. SMISSPROT; Tri. TREMBL; Wp.; WORNDEP; Information

on the WORNDEP database can be found at

http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence

was generated from part of bacterial clone contigs of human

chromosome X, constructed by the Sanger Centre Chromosome X Mapping

Group. Further information can be found at

this sequence was finished as follows unless otherwise noted: all

regions were either double-etranded or sequenced with an alternate

chemistry or covered by high quality data (i.e., phred quality >=

30); an attempt was made to resolve all sequencing problems, such

as compressions and repeats; all regions were covered by at least

one plasmid subclone or more than one M13 subclone; and the

sasembly was contirmed by restriction digest. RP6-198C4 is from the

library RPGI-6 constructed by the group of Pieter de Jong. For

further details see

http://www.space.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                12853948
```

NOTICE: This sequence may not represent the entire insert of this fone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

Contact: sapiens@watson.wustl.edu site: http://genome.wustl.edu Center project name: H_NH0095P09 This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:

The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project (Eric D. Green, Director), John D. McPherson in the Department of Genetics (Washington University), and the Washington University Genome Sequencing Center. For additional information

All Submitted (29-SEP-2001) Sanger Centre, Hinxton, Cambridgeshire, Blirect Submitted (29-SEP-2001) Sanger Centre, Hinxton, Cambridgeshire, Submitted (29-SEP-2001) Sanger Centre, Hinxton, Cambridgeshire, CENO 15A, UK. E-mail enquiries: humquery@sanger.ac.uk on Oct 2, 2001 this sequence version replaced gi:14702155.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotations corresponding to the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality) as compressions and repeats; all regions were covered by a constructed by all regions were covered by as compressions are used to resolve all sequencing problems, such as compressions are used to associate primary accession numbers given in the feature table with their source databases: Em; EMBL; Sw; SWISSPROT; Tr:, TREMBL; Wp:, WORWEPP; Information on the WORWPEP database can be found at the contigs of human chromosome 9, constructed by the Sanger Centre Chromosome 9 mapping Group. Purcher information can be found at the proup of Pieter de Jong. For further details see the contigs of human chroming and replace and the prompt of Pieter de Jong. For further details see the contigned by the sanger human the contribution of the proup of Pieter de Jong. For further details see

SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the
                                                                               CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Peatures listing.
                                                                                                                                                                                                                                                                                                  ANDIATION OF FEMILIES.

STSS are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Muc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes adminarity (expect < 1e-34) to the EST and cDNA sequences identified shifts that maintained sequence continuity across the splice intocions. Sequences that are not identical matches are annotated as similar.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          at URL:

The CHORI-231 chimpanzee BAC library was prepared from DNA isolated
from the blood of a single male chimpanzee using published
protocols (Oscagawa, F. et al. Genomics 52:1-8). The DNA from the
chimpanzee ('Clint') was obtained from the Yerkes Primate Center in
Atlanta. The library was prepared by Baoli Zhu, Chung Li Shu,
Kazutoyo Oscagawa, Evan Eichler & Pieter J de Jong. The library
characteristics are described at
http://www.chori.org/bacpac/chimpanzee251.htm.

VBCTOR: pTARBAC2.1
The PTB1 chimpanzee BAC library was prepared from DNA isolated from
cultured cells established from the blood of a single male
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Clones may be obtained from Asao Fujiyama and co-workers (http://www.gsc.riken.go.jp).

RETOR: pxS145
The PTF22 chimpanzee Fosmid library was prepared from DNA isolated from cultured cells established from the blood of a single male
                                                                                                                                                                                                                                                                            The RPCI-43 chimpanzee BAC library was prepared from DNA isolated from the blood of a single male chimpanzee using published protocols (Osoegawa, K. et al. Genomics 52:1-8). The DNA from the chimpanzee ('Cilnit') was obtained from the Yerkes Primate Center i Atlanta. The library was prepared by Baoli Zhu, Chung Li Shu, Kazutoyo Osoegawa, Evan Eichler & Pieter J de Jong. The library characteristics are described at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence Quality Assessment:
This entry has been annotated with sequence
estimates computed by the Phrap assembly program.
All manually edited bases have been reduced to quality zero.
Quality levels above 40 are expected to have less than 1 error in
                                9

* NOTE: This is a "working draft' sequence. It currently
consists of 13 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence
as soon as it is available and the accession number will

* be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              NOTICE: This sequence may not represent the entire insert of this colone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence was finished as follows unless otherwise noted:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Direct Submission

Submitted (05-MAR-2001) Sanger Centre, Hinxton, Cambridgeshire, CBIO 15A, UK. B-mail enquiries: humquery@sanger.ac.uk Clone request@sanger.ac.uk

On Nov 20, 2000 this sequence version replaced gi:11125403.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em:, EMBL; Sw.: SWISSRROT; Tr:, TREMBL; Wp:, WORWEEP; Information on the WORNEP database can be found at their source databases:

Em:, EMBL; Sw.: SWISSRROT; Tr:, TREMBL; Wp:, WORWEEP; Information chttp://www.sanger.ac.uk/Projects/Calegans/wormpep This sequence has generated from part of bacterial clone contigs of human chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping Group. Further information can be found at

http://www.sanger.ac.uk/HGP/Chr6

IMPORTANT: This sequence is not the entire insert of clone RPII-12BI3 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap.

The true left end of clone RPII-12BI3 is at 1 in this sequence. The true right end of clone RPII-12BI3 is at 1 in this sequence and alternate chemistry or covered by high quality data (i.e., phred quality >= 30) an attempt was made to resolve all sequenced by the group problems, such as compressions and repeats; all regions were either double-stranded or sequenced by the group problems, such as compressions and reseats; all regions were of the assembly was confirmed by restriction digest.

RPII-12BI3 is from the library RCI-11.1 constructed by the group of Pieter de Jong. Por further details see

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           repeat_region
                                                                                                      repeat_region
requests: clonerequest@sanger.ac.uk
On Jul 17, 2001 this sequence version replaced gi:13751261.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the voratation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; WORMPEP; Information on the WORMPEP.
                                                                                                                                                                                                                                                                                                                                                                                                                                               ductuaise can be round a cut, Projects/C elegans/wormpep This sequence buttp://www sanger.ac.uk/Projects/C elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 13, constructed by the Sanger Centre Chromosome 13 Mapping Group. Further information can be found at http://www.aanger.ac.uk/HGP/Chr13
RP11-456B18 is from the library RPC1-11.2 constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm
NPCTOR: pBACe3.6
IMPORTANT: This sequence is not the entire insert of clone RP1-456B18 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap.
The true right end of clone RP11-456B18 is at 140756 in this sequence. The true left end of clone RP11-78116 is at 68441 in this sequence. The true right end of clone RP11-108H9 is at 100 in this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           .6146 of consensus"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              NOTE: This is a 'working draft' sequence. It currently consists of 20 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be
                                                                                                                                                                                                                                                                                            Bukaryogia, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi, Mammalia; Eutheria, Primates, Catarrhini, Hominidae, Homo.
